

The **\$3.8 Billion** Flight Compensation Dilemma

Airlines systematically exploit information asymmetry to avoid paying statutory compensation owed to travelers under Regulation (EC) 261/2004.

\$3.8 Billion

Unclaimed Annual Rights

Passengers are legally entitled to **€250 to €600** per delayed flight. Over **85%** never receive compensation due to bureaucratic friction and hidden claim portals.

The Weather Trap

Unverifiable Airline Excuses

Airlines routinely reject valid claims citing "*extraordinary weather conditions*" or "*ATC restrictions*", knowing ordinary travelers have zero tools to audit aviation meteorological logs.

Asymmetry

Legal & Technical Gap

Everyday humans cannot decode NOAA/METAR isobar charts or cite relevant European Court of Justice rulings (e.g. *C-549/07 Wallentin-Hermann*), leaving them powerless.

Built for Humans: "Set-and-Forget" Quiet Guardian

Designed for everyday travelers who want their rights protected automatically without spending hours battling airline claim bureaucracies.

Everyday Travelers

Families & Vacationers

Suffering stressful 3+ hour delays or cancellations. No legal knowledge needed: simply drop a boarding pass or ticket and let the agent handle everything.

Frequent Flyers

Commuters & Business Trips

No time to fill out complex 10-page forms or track 6-week claim status. OmniClaim AI continuously monitors flight rosters in the background.

1-Click Action

Zero Friction Interaction

The agent stays completely silent in the background. It surfaces **ONLY** when a legally proven cash payout is packaged, calculated, and ready for instant approval.

Autonomous Justice: Leveling the Playing Field

Replacing asymmetric corporate power with verifiable meteorological data and legal precision.

Weather Disprover

Scientific Ground Truth

Audits actual airport METAR weather logs, runway visibility, and wind speeds at departure/arrival. If other aircraft landed safely, the airline's "weather defense" is shattered.

ECJ Precedents

Court-Ready Legal Packets

Automatically cites binding European Court of Justice rulings (C-549/07 Wallentin-Hermann & C-501/17) preventing airlines from claiming technical faults as extraordinary.

Private & Lightweight

In-Browser OCR (<50MB RAM)

Client-side WebAssembly OCR parses tickets in milliseconds with zero server upload of sensitive passport or PNR data, ensuring complete privacy.

Collaborative **Multi-Agent System**

Specialized autonomous agents orchestrating real-time data, aviation regulations, and consumer protection.

AGENT 1

Flight Auditor

Tracks scheduled vs. actual arrival times, calculates geodesic great-circle distances, and evaluates EU261 statutory delays.

AGENT 2

Weather Disprover

Queries live METAR airport weather reports, analyzes cloud ceilings and crosswinds to scientifically disprove force majeure.

AGENT 3

Legal Strategist

Applies statutory brackets (€250 / €400 / €600), matches binding ECJ case precedents, and drafts formal claim letters.

PRODUCTION

Live & Scalable

Hosted on Render with FastAPI + React, <38MB active RAM consumption, and instant 1-click claim exports.
